

PARTIAL PROJECT LIST:

Al-Noor City

- Yemen
- Djibouti
- Egypt
- Morocco
- Tunisia
- USA
- Mexico
- Puerto Rico
- Peru
- Brazil

Bridges:

- Bridge of the Horns (Yemen / Djibouti)
- Bridge of the Kings (Spain / Morocco)
- Bridge of Harmus (Iran / UAE)

Al-Noor Express:

- Africa
- Asia
- Middle East

Airport:

- Sudan

Other Projects:

- Congo
- Madagascar
- Tanzania
- Ethiopia
- Greece
- Bulgaria

Trio Towers:

- Libya

Waterways:

- Africa
- Middle East

CREATING THE INFRASTRUCTURE FOR THE FUTURE OF HUMANITY

AI-NOOR CITIES:

"Al-Noor City" is a globally integrated city challenging our intellectual expectations, commercial financing experiences, cultural limitations, and religious barriers. A first of its kind, and a truly humanitarian effort with the goal of:

- Relieving poverty
- Creating equitable standards of living
- Satisfying the basic needs of its inhabitants
- Establishing sustainable political practices
- Avoiding irreversible damage to nature
- Reconciling development with regenerative capacity of the natural environment

TRIO TOWERS:

"A new engineering and style philosophy" best describes NCDC's new Trio Towers design. To be located in various locations around the world, these towers exude a sense of the future and excite the senses. Unlike anything else ever constructed, these structures mark a new direction in the progression of human civilization.

The Trio Towers design includes one 85-story condominium/commercial tower and two 75-story hotel towers. One remarkable design element of these structures will be where they are built – in the water! The towers will be encircled at their bases by a multi-tiered platform which will connect all three buildings, contain shopping and dining areas, and provide automobile parking spaces. In addition, 3 floors of each tower will be underwater, affording an unforgettable view and experience of an undersea world.

EXPRESSWAYS:

Al-Noor Express will connect many countries within Africa and the Middle East via the "Bridge of the Horns." The system will be composed of a six-lane highway system and two rail systems.

These road and rail systems will be built where there had not previously been any sort of highway or railway network.

This project will finally allow the sharing and trade of the necessities to sustain life, as well as products and services between the two continents.

BRIDGES:

NCDC's vision of new cities and infrastructures for people around the world will include the construction of several new bridges in various locations around the world. These bridges, which promise to be some of the greatest engineering feats of this century will, in many cases, connect continents for the first time. The sharing of resources, the creation of new jobs, and the new opportunities for development will write a new chapter in the history of humanity.

WATERWAYS:

An integral part of the "Al-Noor Express" will be a new trans-national water pipeline to deliver this much needed resource to greatly improve quality of life. Water is desperately needed to grow more food in arid zones and to support the growing populations in the Middle East and Africa. This construction lends itself well for the addition of power and communication lines that will also be a part of the new pipeline.
